Pharmaceutical Extrusion Seminar

June 3-4, 2009

This program will address cutting edge extrusion-based manufacturing technologies and processes as applied to drug delivery systems

Information will be presented on a wide range of topics:

- Advantages of continuous extrusion as compared to batch processes
- Staging of unit operations in an extruder to continuously manufacture a solid dosage form
- Upstream consideration for feeding, material handling and containment
- Scale-up of the extrusion process from laboratory to production
- Downstream systems to mate with the extruder
- Material considerations, applications and advances
- Cleaning and maintenance of extrusion equipment
- Equipment and process validation
- Control architectures and issues, including CFR 21 part 11 compliance
- New technologies, i.e. foaming, co-extrusion and continuous spheronization

All attendees will receive the textbook entitled Pharmaceutical Extrusion Technology, the only resource currently available to bring together the technical information to develop pharmaceutical dosage forms that meet quality and regulatory requirements – this is a \$200 value!

COST TO REGISTER

Early registration, if received by April 18, 2009...\$820
If received after this date.....\$920

Prices include handout materials, the textbook Pharmaceutical Extrusion Technology, and meals/reception.

A \$100 cancellation fee will apply if received 10 days before the event. Registrations are limited and available on a first-come, first-served basis.
